

Modular Containment Wall

Modular, hard-walled system provides long-term, high capacity spill containment.

For low-cost, large-capacity spill compliance, look no further than our Modular Containment-Wall System. This design holds a much higher capacity of liquid storage than the shorter-walled systems of the same size. As a highly effective spill containment system, it also offers infinite possibilities for the shape and size of the containment area. Simply customize the containment area on site to fit the project's needs. No anchoring or equipment is required for installation. Realize even more savings by using this spill containment system again and again, as it can be easily disassembled and reassembled.

Modular Containment Wall

The components overlap when connected to provide additional support/security. No tools are necessary for installation.

The 30 MIL polyethylene textured liner is held on the walls with 8-foot long clips. These clips snap over the liner and the straight section walls.

Features

- Heavy-duty (30 mil) textured polyethylene liner for rugged and reliable liquid capture.
- Wall sections in 1', 2' or 3' heights, and 6', 8' or 10' lengths
- Meets SPCC, EPA Container Storage Regulation 40 CFR 264.175
- High Visibility Yellow, but custom color options are available.
- Treated for extended use with UV inhibitors.

Benefits

- Modular wall sections and corners let you form the containment area in nearly any size or shape.
- No equipment is needed for installation. The wall sections are lightweight and can be lifted manually. The walls and the liner clips piece together securely without the use of additional tools.
- Does not require anchoring or securing to the substrate.
- Use this system again and again. The modular design is easy to disassemble and relocate.
